Streaming & AI unlock report · 2026-11-16

Korea native IP 199.241.120.200

Tested directly on the Korea node (egress IP 199.241.120.200). Each result is based on what the service's API or page actually returned, not just the HTTP status code. Tested on 2026-11-16 at 16:20 UTC; repeated runs gave the same results. Items whose evidence says "over IPv6" were tested with an IPv6 address from this data center.

Location	ASN / ISP	IP type
South Korea · Seoul	**AS210528 · Navox Co., Ltd.**	**ISP (per ipinfo)**
Cloudflare sees	Netflix sees	IPv6
loc=KR · colo=HKG	**US (US catalog)**	**Free, from the control panel**

AI services

"Region allowed" = an auth error without a key; blocked regions get unsupported_country or forbidden

Service	Result	Evidence
ChatGPT / OpenAI	Available	API: `Missing bearer authentication` (region allowed); chatgpt.com sees `KR`
Claude / Anthropic	Available	API: `authentication_error` (region allowed); claude.ai shows no region block
Google Gemini	Unlocked	Over IPv6, gemini.google.com opens; Google sees country `KOR`
Microsoft Copilot	Available	copilot.microsoft.com opens (redirects to copilot.com, 200)
Grok / xAI	Available	API: `No credentials presented` (region allowed)
Mistral	Available	API: `Invalid API Key` (region allowed)
DeepSeek	Available	API: `authentication_error` (region allowed)
Groq	Available	API: `invalid_api_key` (region allowed)
Perplexity	Available	API: `invalid_api_key` (region allowed)

IP database lookups

None flags it as a proxy or VPN

Database	Location	Type and flags
ipinfo	Seoul, South Korea	ASN type ISP, AS210528 Navox Co., Ltd.
IP2Location	Seoul, South Korea	Not a proxy
proxycheck	Gimpo, South Korea	Business line, risk score 0
ip-api	Gimpo, South Korea	Not a proxy, not mobile

Streaming

Netflix US; everything else sees Korea

Service	Result	Evidence
Netflix	Full catalog	Non-original Breaking Bad opens, region `US`: the full US catalog
YouTube Premium	Unlocked	Over IPv6, the Premium offer is shown, region `GL=KR`
Prime Video	Available	Returns `currentTerritory=KR`, no restriction flag
TikTok	Available	Page returns `region=KR`
Spotify	Available	Redirects to the Korea site `/kr-ko/premium/`
iQIYI International	Available	Region cookie `mod=kr` (Korea site)

VERDICT

Netflix US catalog plus all 9 AI services, from a Korea IP

Netflix sees the US, so the full US catalog plays; Prime Video, TikTok and Spotify all see Korea; ChatGPT, Claude, Copilot, Grok, Mistral, DeepSeek, Groq and Perplexity all work, with no region block on any of their APIs; YouTube Premium and Gemini unlock over IPv6 and see Korea. Located in Korea, with its ASN classed as an ISP by ipinfo, flagged as a proxy or VPN by none of proxycheck, ip-api and IP2Location, risk score 0.

Korea native IP · ISP network · Netflix US · AI 9 / 9 · IPv6 unlocks YouTube / Gemini · Risk score 0

Great for

US shows and films

Netflix's full US catalog: American shows and films, no workarounds.

AI work and development

All 9 major AI services work (Gemini over IPv6), with no region block on any of their APIs.

Social media and content

TikTok sees Korea: ideal for accounts and campaigns aimed at the Korea market.

Music and subscriptions

Spotify and Prime Video serve their Korea pages, just like for locals.

Korea market business

A local Korea IP for accounts, stores and cross-border work that need a stable Korea presence.

IPv6 unlocks Google services

Get IPv6 free from the control panel; over IPv6, YouTube Premium and Gemini see Korea.

IPv4 + IPv6

Unlock your services over IPv6: IPv4 + IPv6, dual-track

Get IPv6 free from the control panel. Services that support IPv6 use it and see the right region; everything else stays on IPv4.
